NERVOUS-SYSTEM SPECIFIC COTAMER-BINDING TRANSCRIPTION FACTOR N-OCT 3 (BRAIN-SPECIFIC HOMESDBX/POU DOMAIN PROTEIN 2) (BRN-2 PROTEIN).
                                                                                                                                                                                                                                                                                                                                            PLOG. Natl. Acad. Sci. U.S.A. 89:3280-3284(1992).
-!- FUNCTION: TRANSCRIPTION FACTOR THAT BINDS PREFERENTIALLY TO THE RECOGNITION SEQUENCE WHICH CONSISTS OF TWO DISTINCT HALF-SITES, ('GCAT') AND ('TAAT'), SEPRATED BY A NONCONSERVED SPACER REGION OF 0, 2, OR 3 NUCLEOTIDES. POSITIYELY REGULATES THE GENES UNDER THE CONTROL OF CORTICOTROPIN-RELEASING HORMONE (CRH) AND CRH II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SIMILARITY: STRONG TO OTHER "POU" TRANSCRIPTION FACTORS. BELONGS TO CLASS-3 POU.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SUBULIT: BINDS DNA AS A MONOMER (PROBABLE).
SUBCELLULAR LOCATION: NUCLEAR (BY SIMILARITY).
IISSUE SPECIFICITY: MOST HIGHLE EXPRESSED IN KIDNEY, HEART, AND
BROWN ADIPOCYTES. ALSO FOUND IN UTERUS, CERVIX AND VAGINA.
DEVELOPMENTAL STAGE: EXPRESSED IN AN ORGAN SPECIFIC MANNER THROUGH
MID-TO LARTE EMBRYONIC DEVELOPMENT WITH PRESISTERT HIGH-LEVEL
EXPRESSION IN BROWN ADIPOSE TISSUE AND INTESTINAL MUCOSA.
INDUCTION: ACTIVATED BY DIETHYLSTILBESTROL (DES) AND ESTRADIOL IN
                                                                                                                                                                                                                                                                         Sladek R., Bader J. -!- DISEASE: DEPERCYS IN KRY10 ARE THE CAUSE OF EPIDERWOLYTIC HYPERKERATOSIS (EHK) (ALSO KNOWN AS BULLOUS CONGENITAL ICHTHYOSIFORM ERYTHRODERMA (BCIE)); A HEREDITARY SKIN DISORDER CHARACTERIZED BY BLISTERING AND A MARKED THICKENING OF THE STRATUM CORNEUM. AT BIRTH, AFFECTED INDIVIDUALS USUBLIX PRESENT WITH REDNESS, BLISTERS AND SUPERFICIAL EROSIONS DUE TO CYTOLYSIS. WITHIN A FEW WEEKS, THE ERYTHRODERMA AND BLISTER FORMATION DIMINISH AND HYPERREATOSES DEVELOP. TRANSMISSION IS AUTOSOMAL
                                                                                                                                                                                                                                                                                                                                                                                  Arin M.J., Longley M.A., Anton-Lamprecht I., Kurze G., Huber M., Hohl D., Rothnagel J.A., Roop D.R.;
"A novel substitution in keratin 10 in epidermolytic hyperkeratosis.";
J. Invest. Dermatol. 112:506-508(1999)
-!- SUBUNI: HETEROTETRAME NO TWO TYPE I AND TWO TYPE II KERATINS.
KERATIN 10 IS GENERALLY ASSOCIATED WITH KERATIN 1.
-!- TISSUE SPECIFICITY: SEEN IN ALL SUPRABASAL CELL LAYERS INCLUDING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DOMINANT, BUT MOST CASES ARE SPORADIC.
DISRASE: DEFECTS IN KRT10 ARE THE CAUSE OF ANNULAR EDIDERMOLYTIC
ICHTHYOSIS (AEI), A DISTINCT PHENOTYPIC VARIANT OF EDIDERMOLYTIC
HYPERKERAPOSIS. IT RESEMBLES CLINICAL AND HISTOLOGIC FEATURES OF
BOTH EPIDBERMOLYTIC HYPERKERATOSIS AND ICHTHYOSIS BULLOSA OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MISCELLANBOUS: THERE ARE TWO TYPES OF CYTOSKELETAL AND MICROFIBRILLAR KERATIN: I (ACIDIC; 40-55 KDA) [K9 TO K20] AND II (NEUTRAL TO BASIC; 56-70 KDA) [K1 TO K8].

SIMILARITY: BELONGS TO THE INTERMEDIATE FILAMENT FAMILY.
CAUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN EXTENSIVELY IN POSITIONS 513 TO 555.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       chromosome 19q13.3.";
Neurogenetics 1:31-36(1997).
Neurogenetics 1:31-36(1997).

-i- FUNCTION: MAY REGULATE RNA SPLICING OR METABOLISM IN A SPECIFIC SUBSET OF DEVELOPING NEURONS (BY SIMILARITY).

-i- SUBCELLULAR LOCATION: NUCLEAR (BY SIMILARITY).

-i- TISSUB SPECIFICITY: BRAIN. EXPRESSION RESTRICTED TO ASTROCYTES.

-i- DISEASE: MAY BE A TARGET ANTIGEN IN ONE OF THE UNDEFINED HUMAN PARANEOPLASTIC SYNDROMES.
                                                                                                                                                                                                                           01-JUN-1998 (T.EMBLrel. 06, Last sequence update)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 231, Sequence 231, Sequence 131, Sequence 193, Sequence 193, Sequence 193, Sequence 193, Sequence 191, Sequence 185, Sequence 186, Se
